SUMMARY

Full-Stack Developer and AI Engineer with 10+ years of specialized experience building production-grade systems across blockchain protocol engineering, AI infrastructure, and fintech. Founder of PT Antareja Nusantara Resources — building KVP Protocol (Krakenum Chain), a Layer-1 blockchain built in Go (Golang) since 2015 and migrated to Rust in 2020. Deep experience in crypto trading systems including arbitrage bots, DEX integration, multi-chain payment infrastructure, and risk management engines. Background spans 20+ years of total professional experience in technical leadership.

Key deliverables include FinDIGI (live hybrid Web2/Web3 fintech platform at findigi.vercel.app), KVP Protocol Phase 2 (multi-node devnet, P2P sync verified), and `anantla_sdk` — a production multi-chain SDK on NPM supporting 8+ blockchain networks.

Successfully delivered enterprise blockchain solutions including SDK development serving 10+ integrations, payment platforms processing 50,000+ transactions, and smart contract systems handling \$500K+ in value. Strong foundation in system architecture, data management, and technical project leadership from extensive background in resource management and technical operations.

Core Technical Skills: Groq API, LLM Integration, AI Agent Development, Prompt Engineering, Go (Golang), Node.js, Rust, Python, TypeScript, Solidity, PostgreSQL, Redis, Kafka, gRPC, Protobuf, Multi-chain Integration (Ethereum, Polygon, Neon, XRPL, Cardano), REST API Design, Docker, AWS.

EXPERIENCE

PT ANTAREJA NUSANTARA RESOURCES

CEO & Founder | 2015 – Present

Founder and CEO with 10+ years driving R&D across blockchain protocol engineering, AI infrastructure, and fintech — delivering production-grade systems at scale.

KVP Protocol — Krakenum Chain (2015 – Present)

- Designed and built KVP (Kraken Velocity Protocol) — originally developed in Go (Golang) for node mining since 2015, migrated to Rust in 2020 for POSA consensus with fixed-supply economics, deterministic tokenomics, and protocol-level monetary enforcement (no EVM smart contracts)
- Phase 1 (2015–2020): Core protocol implementation — economic engine (genesis, vesting, bucket-based distribution), ledger & storage (RocksDB, append-only TxLog), node runtime (Axum), deterministic state machine, atomic commits, P2P pull-based sync

- Phase 2 (2020–Present): Expanded protocol — multi-node topology (leader/follower), canonical state commitment, snapshot by height, CLI tooling (kvp-cli), devnet verification with full Node A ↔ Node B sync
- Native assets: KVC (fixed supply 1B), KVP-GOLD commodity token; fee routing: 50% burn / 25% treasury / 25% validator rewards

FinDIGI — Hybrid Web2/Web3 Fintech Platform (Feb 2026 – Present)

- Built and deployed FinDIGI (findigi.vercel.app) — all-in-one fintech platform with on-ramp/off-ramp, FinVault (custodial/non-custodial wallets), cross-chain swaps, B2C and B2B maker-checker approval workflows
- Built FinChat — production AI assistant (Groq API + Llama) with multi-turn conversation, intent routing, and CTA action support; integrated directly into developer portal
- Architected 133 REST API endpoints across 20 modules with full OpenAPI spec, auto-generated Postman collection, and interactive API Challenge Hub

KrakenWorld Online — Blockchain MMORPG (2026, Blueprint Stage)

- Authored full Game Design Document (GDD v1.0) for a fully on-chain 3D Open World MMORPG powered by Krakenum Chain (KVP Protocol)
- Designed complete token economy: 3 civilization tokens (VEL, ELX, KRT) + KVC native coin, in-game DEX, Chip War macro-event, mining/crafting system, on-chain governance (presidential elections, guild/party system)
- Planned tech stack: Godot 4 (game engine), Node.js + Rust (backend services), PostgreSQL + Redis, KVP Protocol API bridge for on-chain settlement

Technologies: Rust, Node.js, Python, TypeScript, RocksDB, Axum, PostgreSQL, Redis, Groq API, Llama LLM, Docker, AWS, Godot 4

ANANTLA TECH VENTURES

Full Stack Developer (Backend Focus) | Feb 2025 – Dec 2025

Full-stack developer for fintech blockchain platform, responsible for multi-chain payment infrastructure, SDK development, and AI-powered commerce integration.

Key Responsibilities & Achievements:

- Architected and developed multi-chain blockchain payment platform supporting Ethereum, Polygon, and Neon networks, processing 50,000+ transactions with 99.9% uptime and sub-2-second confirmation times
- Built production-ready SDK (`anantla_sdk`) from scratch and published on NPM, featuring 50+ API endpoints with comprehensive TypeScript definitions, enabling 10+ third-party integrations
- Designed and implemented smart contract event relay system using Ethers.js and Node.js for real-time payment verification and automated order processing with zero missed events
- Integrated multiple payment gateways including Xendit (Indonesian market) and Indodax (crypto exchange) for seamless fiat-to-crypto on/off ramps
- Implemented KYC/AML compliance through Sumsub eKYC API integration, ensuring regulatory adherence
- Developed AI-powered conversational commerce agent using Groq API with Llama model, featuring product search across Etsy and Tokopedia with natural language processing, cart management, and USDC payment processing

- Built scalable microservices backend architecture with PostgreSQL database, Docker containerization, and AWS EC2 infrastructure supporting high-availability requirements
- Reduced payment processing time by 70% through blockchain automation and smart contract optimization
- Successfully deployed and security-audited smart contracts handling \$500K+ in test transactions

Technologies: Node.js, Express.js, Ethers.js, Solidity, PostgreSQL, React, Next.js, TypeScript, Docker, AWS EC2, Groq API, Llama LLM, Python, WebSockets

GOC MANAGEMENT

Founder | Dec 2020 – Dec 2022

Founded and developed mobile gaming platform with blockchain integration potential.

- Developed mobile MMORPG game using Unreal Engine with JavaScript-based backend infrastructure
- Built real-time multiplayer game server infrastructure supporting 1,000+ concurrent users
- Designed and implemented in-game economy system with virtual asset management
- Architected backend services for user authentication, game state management, and real-time synchronization

Technologies: Unreal Engine, JavaScript, Node.js, WebSockets, MongoDB

PT MULTI SOLUSI SEJAHTERA

Technical Manager | May 2020 – May 2023

Handled geo modeling, exploration management, and technical resource evaluation.

PT BORNEO OLAH SARANA SUKSES, TBK.

Exploration Manager | May 2009 – Dec 2020

Led exploration and data analytics; supported IPO process in 2012.

PT ADIRATNA BANI MAKMUR

Geology Block Model and Database | Jan 2007 – May 2009

GOLDER

Geotechnical Engineer | May 2005 – Jan 2007

EDUCATION

Trisakti University

Bachelor's degree, Geology/Earth Science | 1999 – 2005

TECHNICAL SKILLS

AI & LLM Integration:

- LLM APIs: Groq API, Llama model, conversational AI, natural language processing

- AI Agent Development: multi-turn conversation, tool use, intent routing, context management
- Prompt Engineering: system prompt design, instruction tuning, structured output generation
- AI-powered APIs: REST endpoint design for AI agents, streaming responses, fallback handling

Blockchain Development:

- Smart Contracts: Solidity, Security Auditing, Gas Optimization
- Web3 Libraries: Ethers.js, Web3.js, Web3.py
- Networks: Ethereum, Polygon, BNB Chain, Neon, XRPL, Cardano
- Standards: ERC-20, ERC-721, ERC-1155
- Tools: Hardhat, Remix, MetaMask, WalletConnect, Privy

Backend Development:

- Languages: Rust, Go (Golang), Node.js, Python, TypeScript, JavaScript
- Frameworks: Express.js, FastAPI, NestJS
- Databases: PostgreSQL, MongoDB, Redis
- Architecture: Microservices, RESTful APIs, Event-Driven Architecture, WebSockets, Message Brokers (Kafka, RabbitMQ), gRPC, Protobuf

Frontend Development:

- Frameworks: React, Next.js, TypeScript
- Styling: Tailwind CSS, Material-UI, Shadcn/ui
- Web3 Integration: Wallet connectors, Transaction signing, dApp development

DevOps & Infrastructure:

- Cloud Platforms: AWS (EC2, S3, RDS, Lambda)
- Containerization: Docker, Docker Compose
- Version Control: Git, GitHub, GitLab
- CI/CD: GitHub Actions, Jenkins
- Monitoring: Datadog, CloudWatch

Payment Systems & Integration:

- Cryptocurrency: USDC, Multi-chain transfers, Escrow systems, Token standards
- Fiat Gateways: Xendit, Stripe, Indodax
- KYC/AML: Sumsub eKYC integration
- APIs: RESTful design, Webhook handling, OAuth 2.0, JWT authentication

Development Tools:

- IDEs: VS Code, Postman, Remix IDE
- Project Management: Jira, Notion, Trello

- Communication: Slack, Discord (hendrirh), Telegram

Active Developer Communities:

- Solana Developers Community | Polygon Official Community | Solana Official Community
- Ethereum Official Community | Pi Network Community
- Discord Username: **hendrirh**

Geology & GIS Software:

- Mining & Geology: Datamine, Micromine, Minescape
- GIS & Mapping: AutoCAD, MapInfo, Esri ArcGIS, Global Mapper, Surfer
- Geotechnical: GInt6, Slope/W
- Hydrogeology: HydroChem
- Database: Exploration Database, Assay Database (Excel-based)

KEY PROJECTS

KVP Protocol — Krakenum Chain (Layer-1 Blockchain)

- Self-built Layer-1 blockchain in Rust — fixed supply (1B KVC), deterministic state machine, no EVM smart contracts, all monetary rules enforced at protocol level
- Delivered: economic engine, RocksDB ledger, append-only TxLog, atomic commit, leader/follower topology, pull-based P2P sync, canonical state commitment, snapshot by height
- Devnet live: Node A ↔ Node B sync verified, CLI tooling (kvp-cli), bucket-based distribution (Community / Investor / Team / Treasury / Validator)
- GitHub: github.com/kraken-backend/kvp-blockchain

Multi-Chain Payment SDK (anantla_sdk)

- Comprehensive blockchain SDK supporting 8+ networks with unified API
- 50+ API endpoints with full TypeScript support and detailed documentation
- Features: Wallet management, transaction signing, event subscriptions, multi-chain support
- Published on NPM: npmjs.com/package/anantla_sdk
- Active maintenance with regular updates and bug fixes

Smart Contract Event Relayer System

- Real-time blockchain event monitoring across multiple chains (Ethereum, Polygon, Neon)
- Automated business logic triggers and payment reconciliation
- 100% automated processing with zero missed events using retry mechanisms
- Integrated with PostgreSQL for event logging and state management

FinDIGI Platform + FinChat AI Agent (findigi.vercel.app)

- All-in-one hybrid Web2/Web3 fintech platform with B2C and B2B operational flows, live in production

- FinChat: production AI assistant (Groq API + Llama) with multi-turn conversation, intent routing, and CTA action support — accessible at /developers page
- AI agent for end-to-end conversational commerce: natural language product search (Etsy + Tokopedia), checkout, USDC payment, and order fulfillment
- 133 REST API endpoints across 20 modules with full OpenAPI spec and auto-generated Postman collection
- USDC payment processing with automatic settlement and reconciliation
- Cross-border e-commerce with cryptocurrency payments
- Integration with Etsy and Tokopedia APIs for product sourcing

Biznest — Financial Operating System (biznest-ten.vercel.app)

- Built and deployed Biznest (biznest-ten.vercel.app) — Financial OS for multi-business owners combining treasury governance, double-entry accounting engine, wallet system, expense approval workflow, and real-time business monitoring in a single platform
- Architected multi-entity RBAC system with 4 roles (Super Admin, Admin, Staff, Client) with triple-layer isolation (navigation + routing + API)
- Implemented double-entry accounting foundation with COA, ledger, journal, and automated bookkeeping engine supporting multi-business financial integrity
- Built treasury governance system with approval engine, central wallet, and multi-business capital flow management
- Technologies: Node.js, Express.js, TypeScript, Prisma ORM, PostgreSQL (Neon), React 19, Vite, Tailwind CSS v4, shadcn/ui, Zustand, Railway, Vercel

Crypto Arbitrage Trading Bot

- Automated trading system on BNB Smart Chain
- Real-time price monitoring across multiple DEXs
- Smart contract-based execution with gas optimization
- Risk management and profit calculation algorithms with automated position sizing and loss prevention - Designed with exchange microstructure principles: order book monitoring, spread analysis, and latency-optimized execution - Technologies: Node.js, Solidity, BNB Smart Chain, Web3.js, PostgreSQL

KrakenWorld Online — Fully On-Chain 3D MMORPG (Blueprint Stage)

- Full GDD v1.0 authored — 3 civilizations (VAEL, ELYRA, KRATH), fully on-chain economy powered by Krakenum Chain (KVP Protocol)
- Token economy: KVC (native), VEL/ELX/KRT (civilization tokens), in-game DEX with real-time market rates, Chip War macro-event every 24 hours
- On-chain governance: weekly presidential elections, political parties/guilds, diplomacy system, alliance/war declarations
- Planned stack: AI tools Manager + Godot 4 + Unreal Engine 5 or updated (PC), Node.js + Rust (backend), PostgreSQL + Redis, KVP Protocol bridge for on-chain settlement; Phase 4 includes Relic NFTs and mobile roadmap
